----- User Interface Evolution

[Source: Forrester Resource]

Web the **Only** Platform for Applications

>Ubiquitous Reach

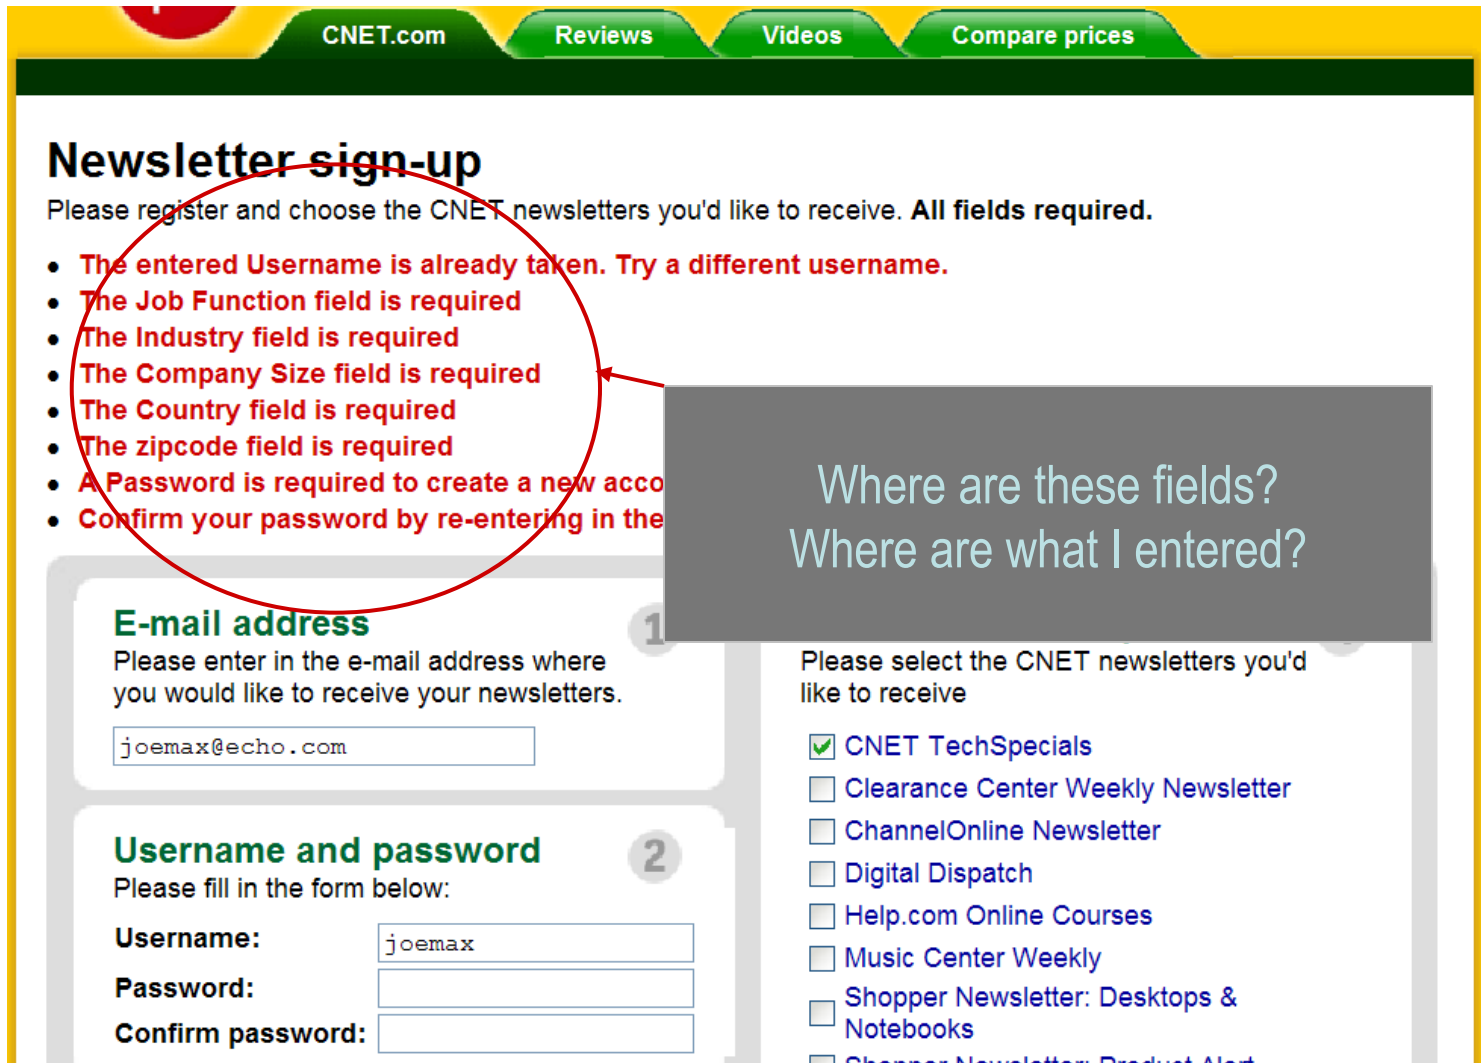

- >Any device, any time and anywhere
- >Globalization and mobility
- >Involvement and collaboration
- >Value = $N * \text{Connectivity}^2$

>Low Total Cost of Ownership

- >Centralized Management
- >No client installation and upgrade
- >Single version

Web applications are great in every measurement,
except no user wants to use it.

User Frustration

Challenges of Web Applications

>Inability to visually represent the complexities in today's applications.

- >Caused by page-based, submit-and-refresh model

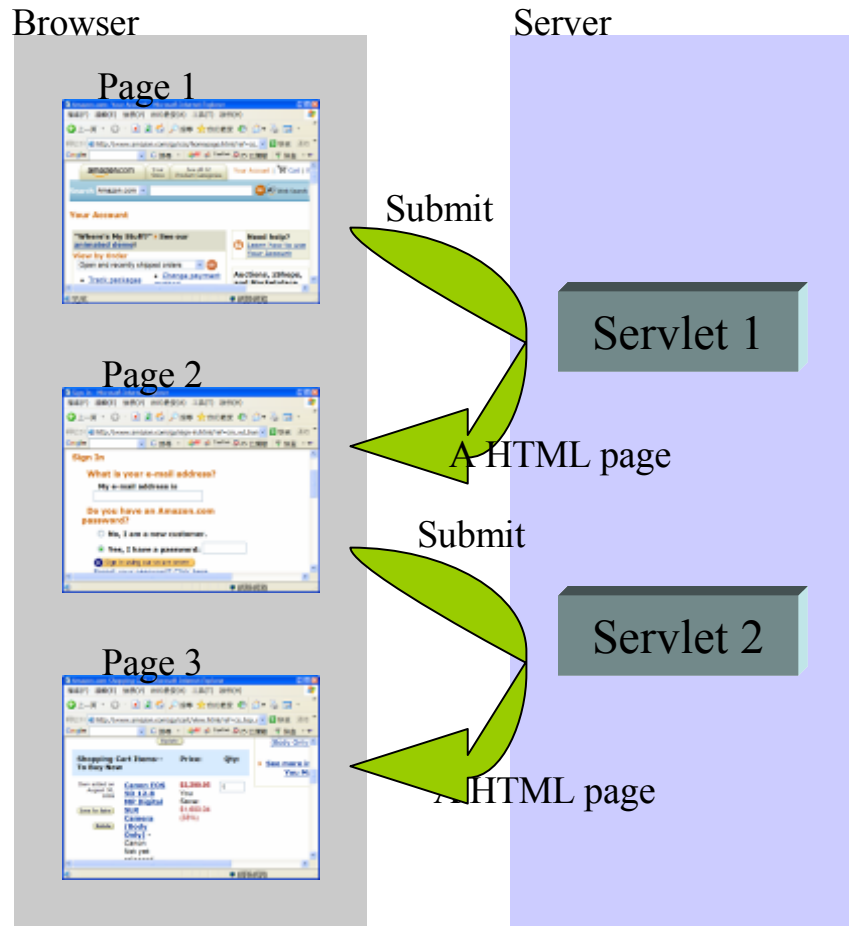

- >Comparing to desktop apps, Web apps look like terminal apps in 1960s

>Consequence

- >User frustration

- >High development costs and risks

Page-based Model of Web Apps

>Page-based

>Submit-and-refresh

>Stateless

>Pros

>Ubiquitous reach

>Low TCO

>Cons

>User frustration

>High development costs
and risks

>Frameworks mostly MVC

>Struts, WebWorks, JSF...

Ajax: A New Approach to Web Apps

Ajax = Asynchronous JavaScript + XML

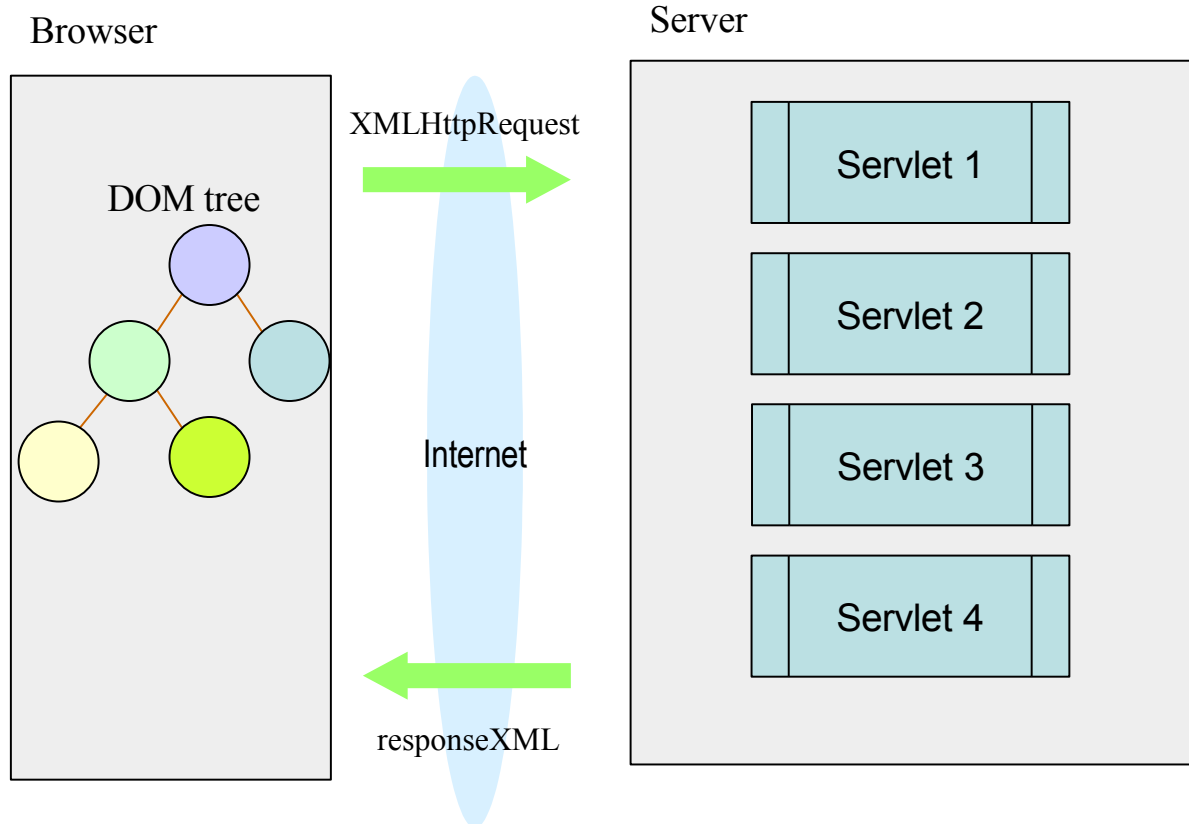

Ajax isn't a technology. It's really several technologies, each flourishing in its own right, coming together in powerful new ways. Ajax incorporates:

- [Standards-based presentation](#) using XHTML and CSS;
- Dynamic display and interaction using the [Document Object Model](#).
- Data interchange and manipulation using [XML and XSLT](#).
- JavaScript binding everything together.
- Asynchronous data retrieval using [XMLHttpRequest](#).

Ajax: Just One API

```
var req = new XMLHttpRequest();  
req.open("POST",  
    "http://killerapp.com/do", true);  
req.send("great=true&rich=true");
```

Ajax: Behind-the-Scene Communication

Challenges of Ajax Applications

- >AJAX adds more complexities and skill prerequisites to the already costly development of Web applications.
 - >Incompatible and sophisticated JavaScript API to manipulate DOM and to communicate
 - >The need to replicate a subset of the application data model and business logic in the browser
 - >Synchronization between the rich UI at the client and the MVC framework at the server

Synchronization Challenge

>When you type the item and click submit, what is the unit price that the server received?

Item	Description	Quantity	Unit	Unit Price	Discount	Amount	Shipping Date
<input type="text"/>	<input type="text"/>	<input type="text" value="1"/>	<input type="text" value="pc(s)"/>	<input type="text" value="0.0"/>	<input type="text" value="0%"/>	<input type="text" value="0"/>	<input type="text"/>
12.040.02 DVD case	DVD case	<input type="text" value="1"/>	<input type="text" value="pc(s)"/>	<input type="text" value="35"/>	<input type="text"/>	<input type="text" value="35"/>	<input type="text"/>

What Is ZK?

➤ ZK is an open-source Ajax Web framework that enables rich UI for Web applications with no JavaScript and little programming.

The #1 active project among SourceForge 125,971 projects.

- 1,506 referring sources
- 176 countries
- 18,401 cities
- 119 languages
- 9,838 domains

Why ZK?

- >1993: Beyond Accounting
 - >Windows-based
 - >Client/Server
 - >C++
 - >36 man-months (including a zApp-like framework)

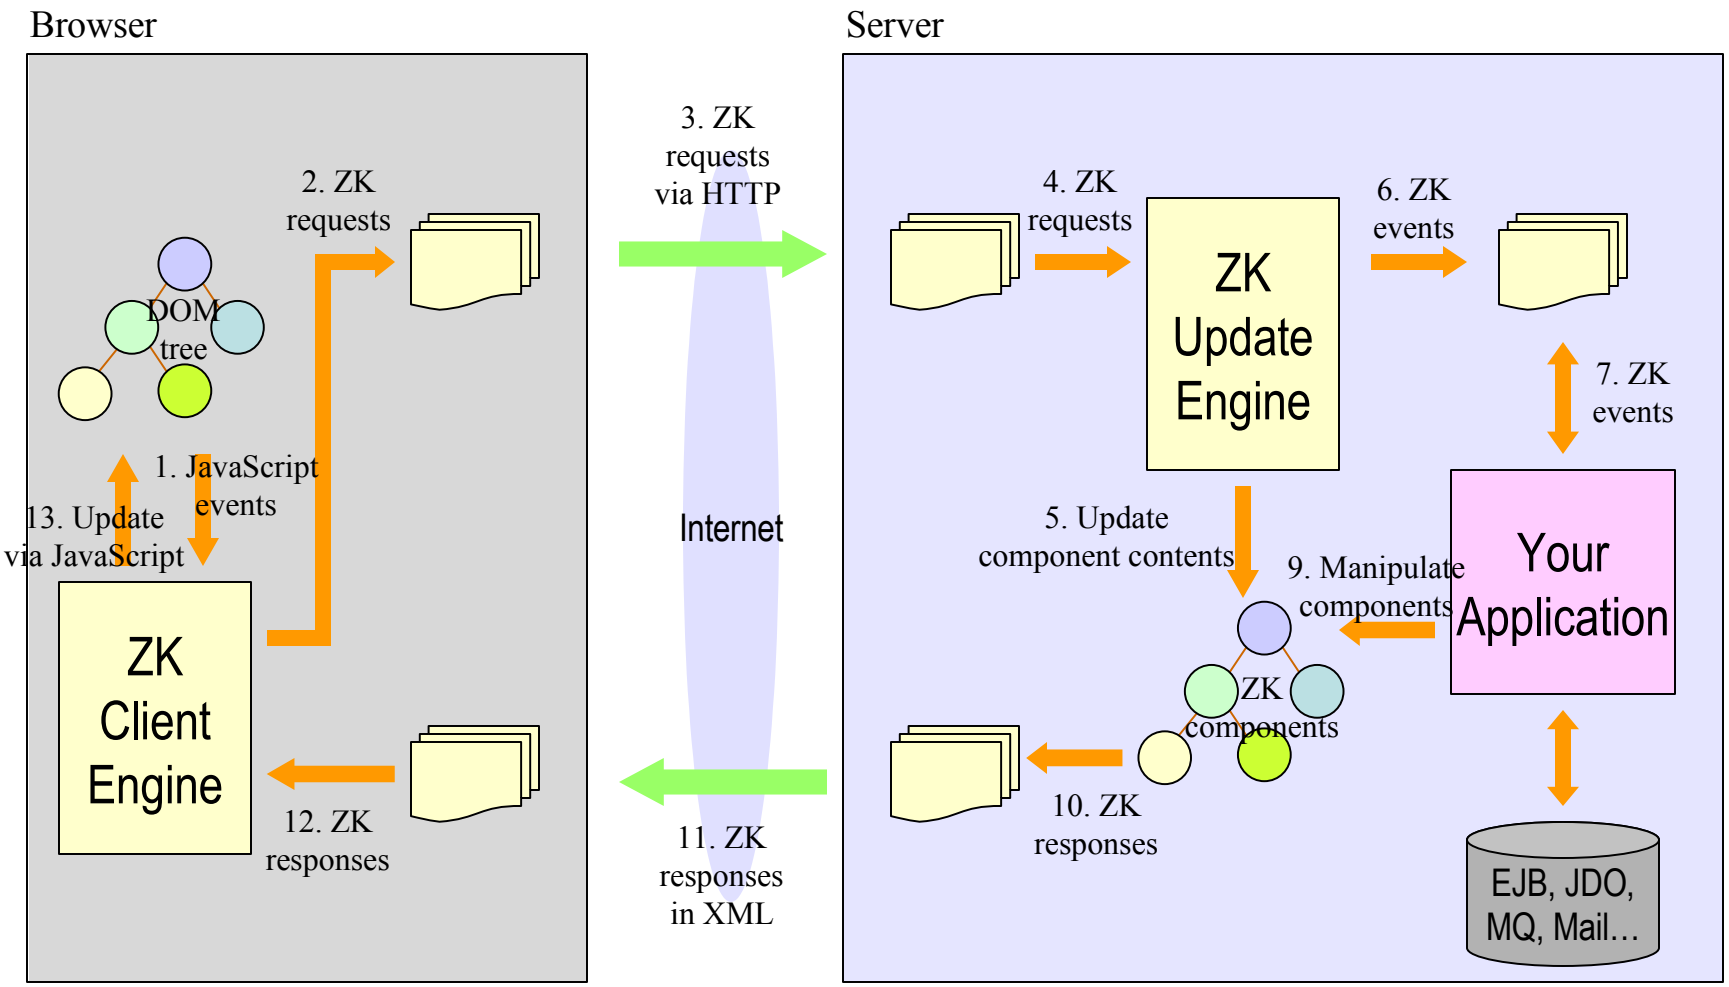

- >2000: RunEC Business Suite
 - >Web-based (with some Ajax)
 - >N-tier
 - >Java
 - >180 man-months (including a Strut+Spring+Hibernate-like framework)

Why a Web App Costs 3~5 Times?

- >Intrinsic or the programming model simply wrong?
- >Worse of all, no user wants to use it!
- >In early 2005, after applying some inventions to a multi-million-dollar project, we believe we got the answer:

ZK - Simple and Rich

ZK Architecture

What Make ZK Simple and Rich?

- With event-driven and server-centric model, ZK brings back the intuitive programming model to Web developers.
- With feature-rich standard-compliant components, ZK enriches Web applications with off-the-shelf building blocks.
- With a markup language, ZK makes designing UI as simple as authoring HTML.

Say Hello in ZK

>Creates a file, say, hello.zul under your Web application, e.g., /usr/tomcat/webapps/myapp.

```
<window border="normal" width="150px">  
Hello world!  
</window>
```

>Then, browse to <http://localhost/myapp/hello.zul>

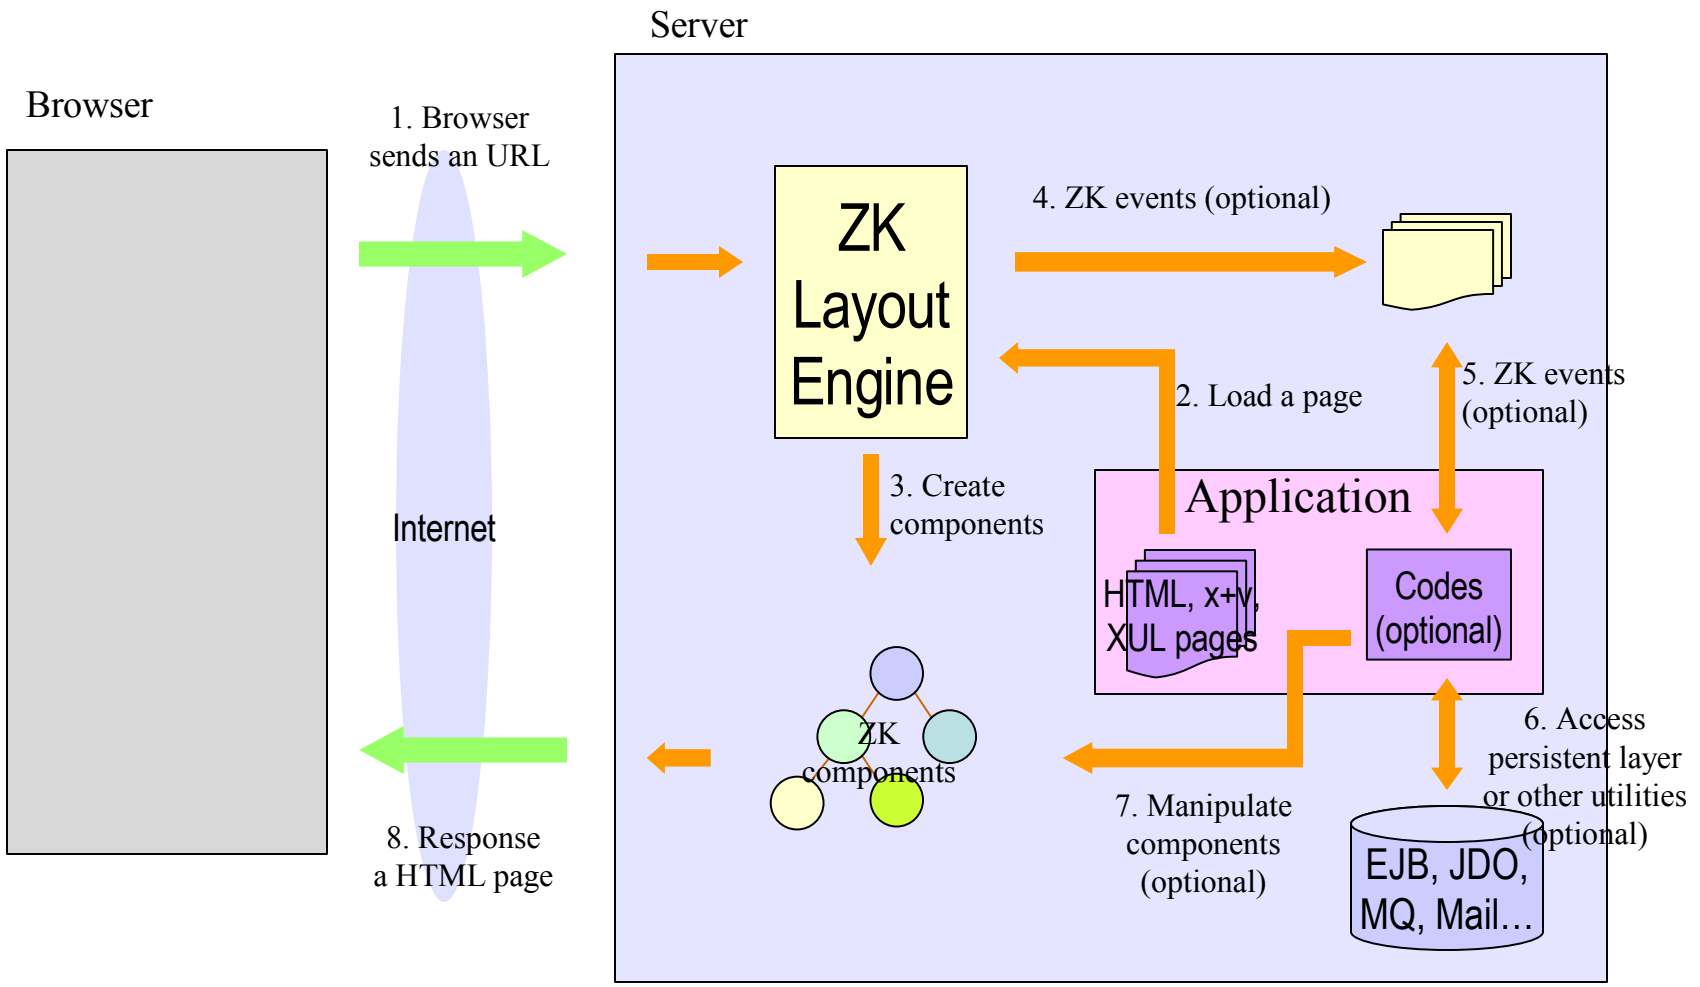

Hello World!

Say Hello in ZK on Demand

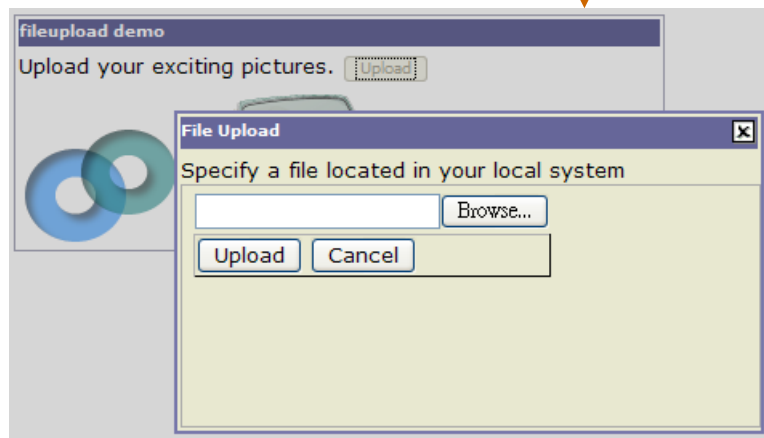

```
<button label="Say Hello"  
    onClick="alert('&quot;Hello world!&quot;');"/>
```

ZK Layout Engine

A Rich Example: Fileupload

Fileupload: UI Design

```
<window id="imgwnd" title="fileupload demo" border="normal">  
  upload your exciting pictures. <button label="upload"/>  
  <separator/>  
</window>
```

Fileupload: Java Codes

```
<window id="imgwnd" title="fileupload demo" border="normal">
  Upload your exciting pictures. <button label="Upload" onClick="upload()"/>
<separator/>
<zscript>
void upload() {
  Object media = Fileupload.get();
  if (media instanceof com.potix.image.Image) {
    Image image = new Image();
    image.setContent(media);
    image.setParent(imgwnd);
  } else if (media != null) {
    MessageBox.show("Not an image: "+media, "Error",
      MessageBox.OK, MessageBox.ERROR);
  }
}
</zscript>
</window>
```

Fileupload: MVC

```
<window id="imgwnd" title="fileupload demo" border="normal" use="upload.Uploader">
  Upload your exciting pictures. <button label="Upload" onClick="imgwnd.upload()"/>
  <separator/>
</window>
```

```
package upload;
public class Uploader extends com.potix.zul.html.Window {
  public void upload() {
    Object media = Fileupload.get();
    if (media instanceof com.potix.image.Image) {
      Image image = new Image();
      image.setContent(media);
      image.setParent(this);
    } else if (media != null) {
      com.potix.zul.html.Messagebox.show("Not an image: "+media,
        "Error", Messagebox.OK, Messagebox.ERROR);
    }
  }
}
```

Sample Components

Population	Percentage
Graduate	20%
College	23%
High School	40%
Others	17%

Subject	From	Received
<input type="checkbox"/> Intel Snares XML	David Needle	7-12-2005
<input type="checkbox"/> Intel Snares XML	Ria Coen	7-12-2005
Unknown chaos		
<input type="checkbox"/> C# versus Java	David Longman	7-10-2005

As the Web reaching our daily lives, the effectiveness of Web applications to communicate with users and the simplicity of developing Today's sophisticated applications becomes more important than ever.

- ◆ SIMPLE
- ◆ RICH

Future

An UI Designer

contrib by Chris Spiliotopoulos, Athens, Greece

Event Driven Model

- >The same event driven model as desktops.
 - >“Don’t call us. We’ll call you.”

- >Like Windows
 - >Event listeners are invoked sequentially.

- >Unlike Windows
 - >You can suspend and resume event listener anytime.
 - >You can add and remove event listeners dynamically.

Static Event Listener

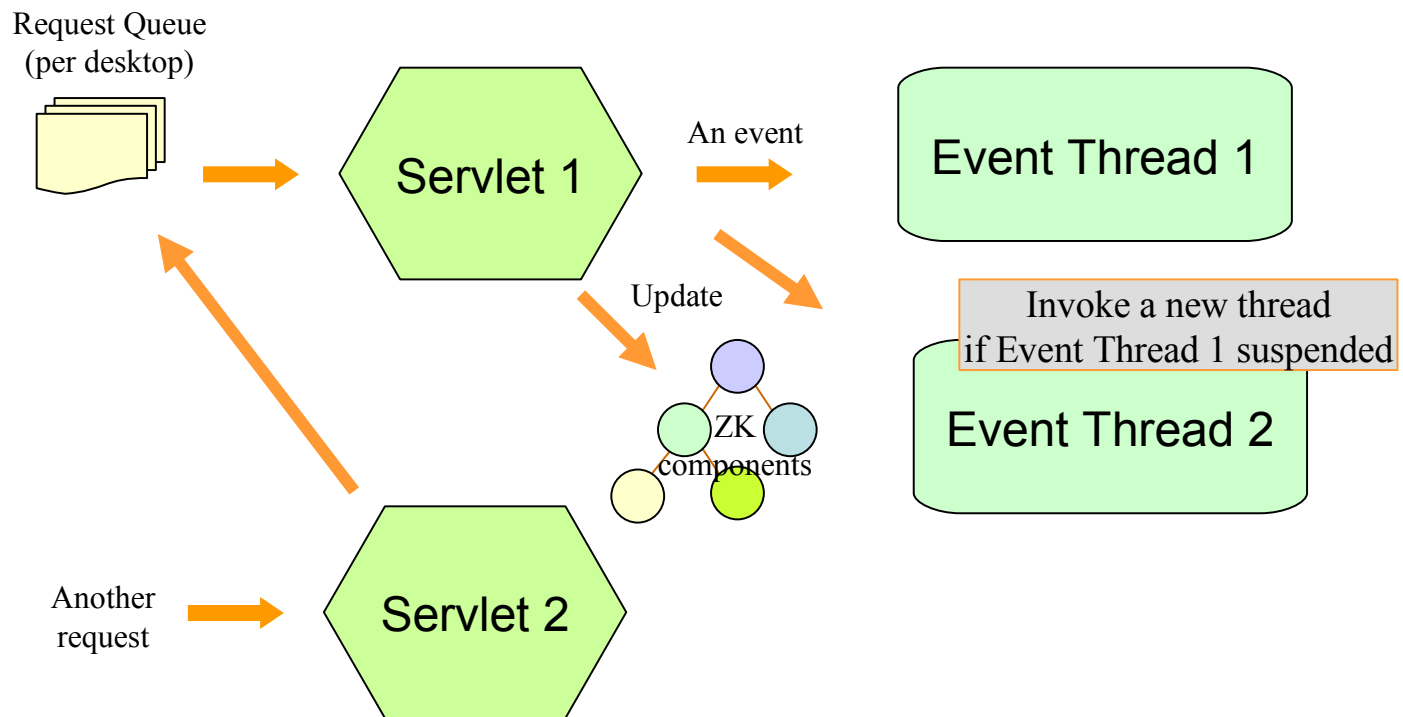

```
public class MyWindow extends com.potix.zul.html.Window {  
    public void onOK() {  
        //called when user press ENTER  
    }  
    public void onCancel() {  
        //called when user press ESC  
    }  
}
```

Dynamic Event Listener

```
class MyListener implements com.potix.zk.ui.event.EventListener {
    public void onEvent(Event event) throws UiException {
        ...//processing the event
    }
    public boolean isAsap() {
        return true; //whether to send back event As Soon As Possible
    }
}
```

```
public void init(Window wnd) {
    wnd.addEventListener(new MyListener()); //register an event listener
    ...
}
```

Event Threading

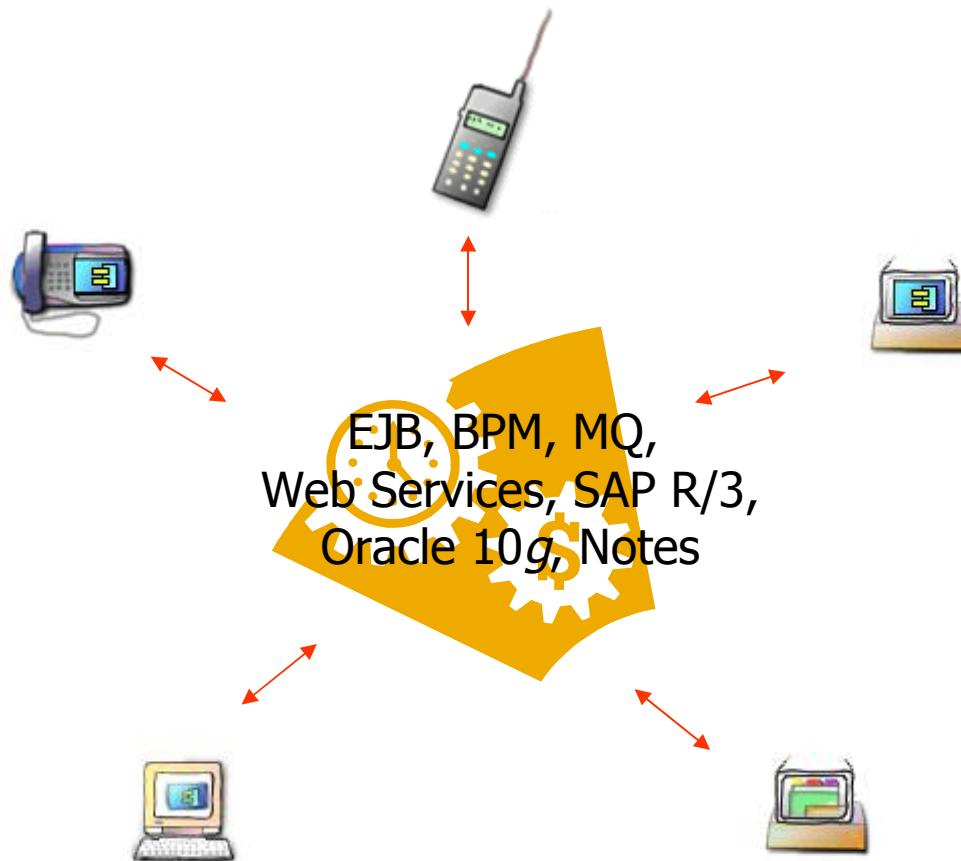

Use ZK with JDBC

```
public class Mywindow extends com.potix.zul.html.window {
    public void onOK() {
        DataSource ds = (DataSource)new InitialContext()
            .lookup("java:comp/env/jdbc/MyDB"); //depend on your configuraion
        Connection conn = null;
        Statement stmt = null;
        try {
            conn = ds.getConnection();
            stmt = conn.prepareStatement("INSERT INTO user values(?, ?)");
            stmt.set(1, name.value);
            stmt.set(2, email.value);
            stmt.executeUpdate();
            stmt.close(); stmt = null;
        } finally { //cleanup
            if (stmt != null) stmt.close();
            if (conn != null) conn.close();
        }
    }
}
```

As a server-centric solution, ZK allows you to use whatever middleware/biz logic you prefer, such as, Hibernate, SAP R/3...

- > **Ajax: Promise and Challenge**
